EDUCATION

University of Illinois Urbana-Champaign	Illinois, USA
Master of Engineering in Autonomy and Robotics	January 2023 – August 2024 (Expected)
<ul style="list-style-type: none">Coursework: Autonomous Vehicle System Engineering, Computer Vision, Introduction to Robotics, Principles of Safe Autonomy, Artificial Intelligence, Deep Learning, and Natural Language Processing	
Chulalongkorn University	Bangkok, Thailand
Bachelor of Engineering in Mechanical Engineering	May 2011 – July 2015
<ul style="list-style-type: none">Coursework: Computer Programming, Mechanics, Thermodynamics, Fluid, Ship Design & BuildingActivities: Engineering Student Committee, Orientation Camp Organizer, Voluntary Camps	

SKILLS & TRAININGS

Programming Languages: C++, Java, and Python

Robotics Related Frameworks: PyTorch, TensorFlow, OpenCV, ROS

Spoken Languages: Thai, English, Japanese

Training: Supervised learning, Unsupervised learning, and Advanced learning algorithms by DeepLearning.AI

PROFESSIONAL EXPERIENCE

Bangkok Mass Transit System Public Company Limited	Bangkok, Thailand
Rolling Stock Planning Engineer	January 2020 – September 2021
<ul style="list-style-type: none">Managed maintenance tasks and resources effectively through SAP software, ensuring high reliability and availability in rail transport operations with fewer than one delay case per monthDemonstrated team management skills by effectively leading and coordinating maintenance teams to achieve operational goals	
Toyota Daihatsu Engineering & Manufacturing Company Limited	Samut Prakan, Thailand
Senior Engineer	June 2015 - June 2019
<ul style="list-style-type: none">Collaborated with local and international designers to develop acoustic performance improvement packages in the design and evaluation process, contributing to the success of the Toyota Corolla Cross in 2021, which achieved a 35% market share within the first twelve months of its launchConducted Root Cause Analysis and Problem Solving to identify and address the underlying reasons for technical issues in the current marketApplied the principle of value engineering and innovative methods to enhance operational efficiency. Achieved an annual reduction of approximately \$1.89 million in acoustical material costs through performance optimization and the implementation of cost-effective materials	

RELEVANT PROJECTS

F1tenth Line Following and Obstacle Avoidance	October 2023 – December 2023
<ul style="list-style-type: none">Designed line detection and line following algorithms utilizing computer vision techniques for precise line detection on a 1/10th scale autonomous racing carDesigned and optimized a Proportional-Integral-Derivative controller (PID) for optimal navigation; integrated LiDAR to enable obstacle avoidance and responsive braking	
A Comparative Analysis of Distracted Driver Detection	October 2023 – December 2023
<ul style="list-style-type: none">Designed and evaluated a Convolutional Neural Network (CNN) from scratch and compared it with a transfer learning model, achieving a peak accuracy of 97.9%	
Vehicle Control and Localization	August 2023 – November 2023
<ul style="list-style-type: none">Executed lane detection algorithm with image thresholding and lane fittingImplemented vehicle lateral controller using pure pursuit with lookahead point estimationImplemented particle filtering for indoor vehicle localization	
Mask R-CNN for Pulmonary Embolism Detection	January 2023 – May 2023
<ul style="list-style-type: none">Implemented Mask Region-based Convolutional Neural Network(Mask R-CNN) for object instance segmentation on CT scan images to identify pulmonary embolism (PE), achieving AP50 of 80
